

To build a highly profitable, full-time income from **kumachiprints.art** while living abroad, you must transition away from thin consumer retail margins and structure your pricing like a premium design gallery.

Below is the raw, data-driven **Unit Economics and Margin Math Playbook** configured for your US-focused operation using a premium domestic print-on-demand fulfillment partner (like Printful or Gelato).

1. The Core Variable Costs (Fulfillment & Shipping)

To sell native to the US market, you must account for five distinct variable costs per order:

- 1. **Fulfillment Base Cost:** The raw wholesale cost charged by the POD partner to print, frame, and pack the item.
- 2. **Domestic US Shipping:** Flat-rate or weight-based courier shipping inside the US.
- 3. **E-Commerce Transaction Fees:** Shopify payments or Stripe credit card processing fees (typically **2.9% + \$0.30** per transaction).
- 4. **Customer Acquisition Cost (CAC):** The amount of ad spend (Meta/Google) required to acquire one paying customer.
- 5. **Operating Buffer:** A small safety margin (roughly 3%) to cover occasional damages, customer returns, or platform app subscriptions.

2. The Direct Comparison: Unframed Paper vs. Premium Framed Canvas

This structural math highlights exactly why selling raw paper prints leaves money on the table, while upgrading to ready-to-hang framed canvas items unlocks true full-time income potential.

Financial Metric	Option A: Unframed Archival Poster (18" x 24")	Option B: Premium Framed Canvas (18" x 24")
Target Retail Price	\$39.00	\$165.00
Wholesale Production Cost	-\$11.50	-\$52.00
Domestic US Shipping	-\$5.50	-\$12.00
Payment Processing (2.9% + \$0.30)	-\$1.43	-\$5.09

Financial Metric	Option A: Unframed Archival Poster (18" x 24")	Option B: Premium Framed Canvas (18" x 24")
Estimated Ad Spend (CAC)	-\$12.00 (<i>Very hard to stay profitable here</i>)	-\$25.00 (<i>Highly competitive & scalable</i>)
Operating Buffer (3%)	-\$1.17	-\$4.95
Net Profit Per Sale	\$7.40	\$65.96
Net Profit Margin (%)	18.9%	39.9%

3. Scaling to a Full-Time Income: The Sales Targets

To achieve a target salary of **\$5,000 net profit per month** after all expenses, look at how the product mix dictates your operational workload:

- **If you only sell Unframed Prints (Option A):**
You need to generate **676 transactions per month** (approx. 22 sales every single day). To get this volume at a 1.5% store conversion rate, you must drive **45,000 unique visitors** to your site monthly.
- **If you focus on Framed Canvases (Option B):**
You only need to generate **76 transactions per month** (approx. 2 to 3 sales per day). At the same 1.5% conversion rate, you only need to drive **5,066 unique visitors** to your site monthly.

Conclusion: Driving 5,000 targeted visitors to your site from your laptop abroad is incredibly achievable using lean social media setups, while trying to drive 45,000 visitors requires a complex corporate marketing budget.

4. Implementation Steps for Kumachi Prints

1. **Turn on Framed Options Instantly:** Log into your e-commerce dashboard and link your current designs to the "Framed Canvas" or "Framed Poster" catalog elements inside your POD app.
2. **Set the Default View to "Framed":** Make sure that when a customer clicks onto a product like *Rapt in Observation*, the variant selector defaults to showing a beautiful framed variant at the higher price tier, rather than the cheapest raw paper option.
3. **Offer "Free US Shipping" by Baking it In:** US consumers hate seeing high shipping fees added at checkout. Raise your retail frame price by \$15 and state **"Free Insured US Shipping"** prominently across your homepage.

Now that the pricing structure and margin math are mapped out, should we write your first **Meta/Instagram Video Ad Script** designed specifically to sell these high-ticket framed options, or should we map out the **US business entity and digital banking architecture** you need to receive these payouts safely from abroad?
